

Maryland Adolescent Survey

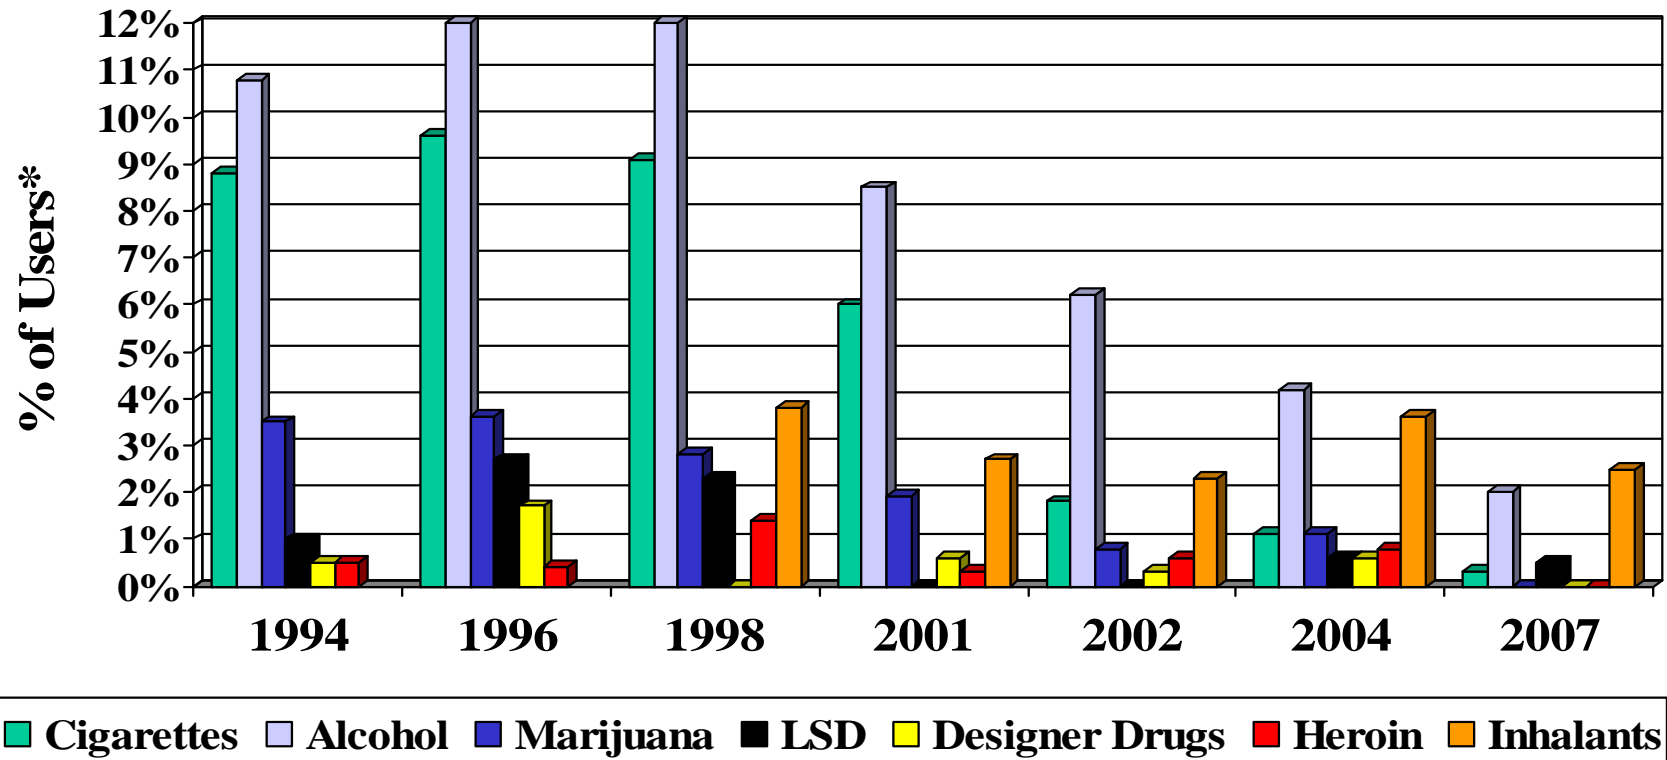

- Conducted by the Maryland State Department of Education (MSDE), with joint support from the Alcohol and Drug Abuse Administration, the Department of Health and Mental Hygiene, and the Maryland Highway Safety Office
 - Provides an important resource for policymakers, program planners, and school staff.
- Every 2 years, Maryland's 6th, 8th, 10th, and 12th graders are surveyed to determine the nature, extent, and trend of alcohol, tobacco, and other drug use among adolescents.
 - The sampling strategy used for the 1994, 1996, 1998, 2001, 2002, 2004 and 2007 surveys permits generalizations about usage patterns at the school system level and state level.

Maryland Adolescent Survey

- The 2007 survey investigates current use patterns, information, and attitudes that are believed to be associated with substance use.
- Students are queried about their perceptions on safety, including whether they feel unsafe at school, going to or from school, and in their neighborhood.
 - Provides critical and timely information necessary to planning and implementing various violence prevention initiatives currently underway throughout Maryland schools.
